Climate Change

Irelands Energy Syndrome — https://youtu.be/qbsoh7qz6kw

What's driving Ireland's energy crisis isn't bad luck… it's design. The Price Of Power is a ground-level investigation into how Ireland became one of the most expensive places in Europe to keep the lights on. From wind curtailment to gas dependency, from battery rollouts to broken planning, this is a system under strain and few seem willing to confront it. Through on-site reporting, expert voices, public records, and first-hand accounts, this film traces the threads behind rising costs, fragile infrastructure, and decisions that are reshaping the country's future. This isn't just about energy. It's about control who has it, who doesn't, and who pays the price.

Whats driving up costs in Ireland? — https://youtu.be/LZCJ-8cwcSA

We break down the three hidden mechanisms driving up the cost of everything in Ireland. We'll examine data centres, interconnectors, hydrogen storage, renewable energy policy, carbon taxes, electricity market reform, and the unique challenges of running an energy system on an island at the edge of Europe. Marginal Pricing Explained: Why electricity generated by cheap wind farms can still be sold at expensive gas-fired prices. The strange market mechanism that determines what every generator gets paid. Curtailment Payments Explained: Ireland is paying hundreds of millions of euro every year to switch wind turbines off. We examine how curtailment works, why renewable energy is being wasted, and who ultimately pays the bill. Capacity Payments Explained: Why Ireland spends billions guaranteeing backup power stations that may only operate for a handful of days each year. The hidden costs built into the electricity system.

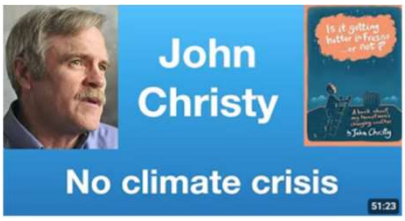

Lord Monckton: Net Zero Emissions — The Costliest Error of Physics and of Economics in History — https://youtu.be/91z7YPCLSWk

Lord Monckton has authored numerous papers on the climate issue both for the layman and scientific community. He established in a paper for the World Federation of Scientists that CO2 has a social benefit, not a social cost. He was also a co-author of the paper that showed the claim of "97% scientific consensus" about climate change to be false

The NET ZERO Scam, Reform's Rise & Thatcher's Legacy | Lord Monckton x Peter McCormack Show — https://youtu.be/UpyMt69Vg84

Christopher Monckton is a former advisor to Margaret Thatcher, a mathematician, a climate skeptic and a fierce critic of state overreach. In this interview, Lord Monckton tears into Britain's deep state, the climate cult, and the moral collapse of Western politics. We talk about the real cost of Net Zero, the true roots of liberty, and how institutional rot, from the courts to the civil service, has sabotaged the country. Monckton dives into Thatcher's forgotten legacy, the economic philosophy behind small government and why love, not control, must sit at the heart of politics.

John Christy: Climate Change is Not a Crisis | Tom Nelson Pod #260 — https://youtu.be/TwYVyU_q9Uo

John R. Christy is a Distinguished Professor of Atmospheric Science and Director of the Earth System Science Center at the University of Alabama in Huntsville. He has served as Alabama's State Climatologist since 2000 and is best known for developing, along with Roy Spencer, a global temperature dataset from satellite microwave measurements. For this work, Christy and Spencer were awarded NASA's Medal for Exceptional Scientific Achievement in 1991 and a Special Award from the American Meteorological Society in 1996.

John Christy on The Economics and Politics of Climate Change — https://youtu.be/UpyMt69Vg84

As part of Uncomfortable Learning at Williams, Prof. John Christy gave a talk entitled "The Economics and Politics of Climate Change" - covers the key points including economic aspects. Includes a Q&A section at the end.

Lucy Biggers | Tom Nelson Pod #323 — https://youtu.be/mfJfXDtBwyk

Tom Nelson interviews former climate activist, Lucy Biggars, who discusses her story in climate activism and how she came to discover that the mainstream messaging around climate didn't correlate with the reality and was spreading a destructive alarmist message.

Confessions of a Former Climate Activist — https://youtu.be/OybheweZGxw

Before I met Lucy at The Free Press offices, she was fighting to ban plastic straws and posing with Alexandria Ocasio-Cortez and Greta Thunberg. In today's Confession, Lucy tells us about her time in the climate movement, when she became a prominent voice on social media. She protested the Dakota Access Pipeline and pushed for the Green New Deal to be passed. Now, Lucy describes herself as a climate realist. She doesn't think the world is going to implode because the Earth is heating up, and she definitely doesn't think paper straws are going to save us. In our conversation, we talk about the moment she started to question the climate movement, what it took to walk away from the cause she defined herself by, and what the science tells us now about climate change.

	**Climate: The Movie**	https://www.youtube.com/watch?v=A24fWmNA6lM
	The film that lifts the lid on the climate alarm, and the dark forces behind the climate consensus. Written and directed by Martin Durkin. Produced by Tom Nelson.	
	**Whistleblower Explains WEF's Climate Scam Agenda – Desiree Fixler**	https://youtu.be/tjUBFSUkWzk
	In this conversation, Desiree explains what the WEF actually is, how stakeholder capitalism replaced traditional shareholder accountability, and why ESG, DEI, and net zero targets became effectively mandatory across global finance. She outlines how these frameworks are enforced through incentives, reputational pressure, and regulatory alignment — often without meaningful scrutiny. This episode isn't a slogan-driven debate about climate change. It's a first-hand account of corporate governance, compliance pressure, and institutional conformity — told by someone who once supported the system she now questions. Fixler is careful to distinguish between environmental goals and the structures used to enforce them, arguing that transparency and accountability were replaced by box-ticking and narrative management.	
	**This Isn't Science, It's Ideology - Kathryn Porter**	https://youtu.be/MzCiEHGVMwA
	Kathryn Porter is an independent energy consultant and commentator with over 25 years' experience in the energy and finance sectors. She covers all of the issues associated with an over reliance on renewables such as wind and solar, and the costs and complications involved.	
	**7 Lies We're Told About Climate Change | Michael Shellenberger**	https://youtu.be/fQYIZpa3bPA
	Recently, Bill Gates very publicly pivoted on climate change, rejecting "doomsday" predictions. Is that a sign that the era of climate alarmism is coming to a close? That's what I wanted to find out when I sat down with Michael Shellenberger, author of "Apocalypse Never" and founder of Public.news and the nonprofit Environmental Progress. From rising sea levels to surging forest fires to dying polar bears to disappearing coral reefs, much of what we've been told about climate change is not true, he says. The rising sea level narrative, for example, rests entirely on computer models that were manipulated to produce the desired outcome, Shellenberger says. "It's clear that the activist scientists were manipulating models to show an acceleration in sea level rise when the only long-term, reliable source of data, which is called tide gauge data ... shows no acceleration from the 1850s on," he says. How is data cherry-picked or skewed to create misleading narratives when it comes to climate change?	
	**Anika Sweetland: "A Load of Bollocks?: The Trillion Dollar Climate Scare" #441**	https://youtu.be/nPFz0VKZb7Y
	Anika Sweetland describes becoming fearful of climate change after a school assignment, obsessively following catastrophic headlines, studying climate science, and suffering severe health issues she links to eco-anxiety. During lockdown and after observing net zero's economic impacts in England, she began questioning claims, researching data on topics like sea levels, crop yields, and past cooling vs warming scares, and concluded she had been "brainwashed." She discusses media ethics, impacts on children, and argues climate fears enable centralized control. Sweetland and host Tom discuss her new book, its humor, an upcoming Audible version, and support from physicist Will Happer, who wrote the foreword.
